CLAIMS

1. A hardcoat agent composition which comprises a fluorine-containing polyether compound (A) having a perfluoropolyether unit, urethane bond and active energy ray reactive group and a curable compound (B) having equal to or more than 2 active energy ray polymerizing groups in the molecule.

10 2. The hardcoat agent composition of Claim 1 wherein the fluorine-containing polyether compound (A) is contained in a range from 0.01 parts by weight or greater to 3 parts by weight or less in relation to 100 parts by weight of a nonvolatile part in the said composition.

15

- 3. The hardcoat agent composition of Claim 1 or Claim 2 wherein the curable compound (B) contains 65 to 100 % by weight of a curable compound (Bt) having 3 or more active energy ray polymerizing groups in the molecule and 0 to 35 % by weight of a curable compound (Bd) having 2 active energy ray polymerizing groups in the molecule on the basis of the curable compound (B).
- The hardcoat agent composition of anyone of Claims
 1 to 3 wherein the fluorine-containing polyether compound (A)

has the number average molecular weight ranging from 500 or greater to 10,000 or less on the basis of polystyrene standard determined by GPC (Gel Permeation Chromatography).

- 5. The hardcoat agent composition of anyone of Claims
 1 to 4 wherein the fluorine-containing polyether compound (A)
 has 2 or more active energy ray reactive groups in the molecule.
- 6. The hardcoat agent composition of any one of Claims
 10 1 to 5 wherein active energy ray reactive groups contained in
 the fluorine-containing polyether compound (A) are selected
 from groups consisting of an (meth) acryloyl group and vinyl
 group.
- 15 7. The hardcoat agent composition of any one of Claims
 1 to 6 wherein the fluorine-containing polyether compound (A)
 is a compound in which (meth) acryloyl is introduced via urethane
 bond into a hydroxyl group of a fluorine-containing polyether
 compound having a hydroxyl group at the end and also having
 20 a perfluoropolyether unit.
 - 8. The hardcoat agent composition of any one of Claims
 1 to 7 wherein additionally contained are inorganic
 microparticles (C) with a mean particle diameter of 100nm or
 less.

9. The hardcoat agent composition of Claim 8 wherein the inorganic microparticles (C) ranging from 5 parts by weight or greater to 500 parts by weight or less are contained in relation to 100 parts by weight of the curable compound (B).

5

10. The hardcoat agent composition of Claim 8 or Claim 9 wherein the inorganic microparticles (C) are microparticles of metal or metalloid oxide or microparticles of metal or metalloid sulfide.

- 11. The hardcoat agent composition of anyone of Claims 8 to 10 wherein the inorganic microparticles (C) are silica microparticles.
- 15 12. The hardcoat agent composition of anyone of Claims
 8 to 11 wherein the inorganic microparticles (C) are
 surface-modified by a hydrolysable silane compound having an
 active energy ray reactive group.
- 13. A thing whose surface is given a hardcoat layer having a curable substance of the hardcoat agent composition described in any one of Claims 1 to 12.
 - 14. An optical information medium comprising:
- 25 a supporting substrate;

a film substance composed of single or multiple layers containing at least a recording layer or a reflecting layer on the supporting substrate; and

hardcoat layer containing a curable substance of the hardcoat agent composition of any one of Claims 1 to 12, formed on at least either a surface of the above-mentioned supporting substrate or a surface the above-mentioned film substance.

- 15. The optical information medium of Claim 14 wherein,
 10 regarding the surface of the above-mentioned supporting
 substrate and that of the above-mentioned film substance, a
 surface which is to be a light entering side is formed by the
 above-mentioned hardcoat layer.
- 16. An optical information medium having an information recording layer on the supporting substrate and a light transmitting layer on the information recording layer, and the optical information medium having a hardcoat layer containing a curable substance of the hardcoat agent composition of any one of Claims 1 to 12 on the light transmitting layer.
